

MEDS EDU

Bridging the
gap between
academia and
clinical practice

WWW.BETTER.CARE

Prepared for the future. Today.

Meds EDU is an initiative dedicated to **helping universities train students in medication management**, preparing them for the complexities they'll encounter in their future clinical practice.

Through our collaborative efforts, **we empower students to learn** about the principles of prescribing, reviewing, and administering medications in a contemporary, tech-savvy manner.

We facilitate a comprehensive understanding of medication management principles while emphasising **the importance of the patient safety** aspect of modern technology.

Why Meds EDU

It equips students with the necessary skills in electronic prescribing and medication administration, ensuring they are prepared for the future landscape of healthcare. By embracing these modern practices, students gain a competitive advantage in the job market.

As paper-based prescriptions become obsolete, students can become part of the ongoing digital transformation of healthcare.

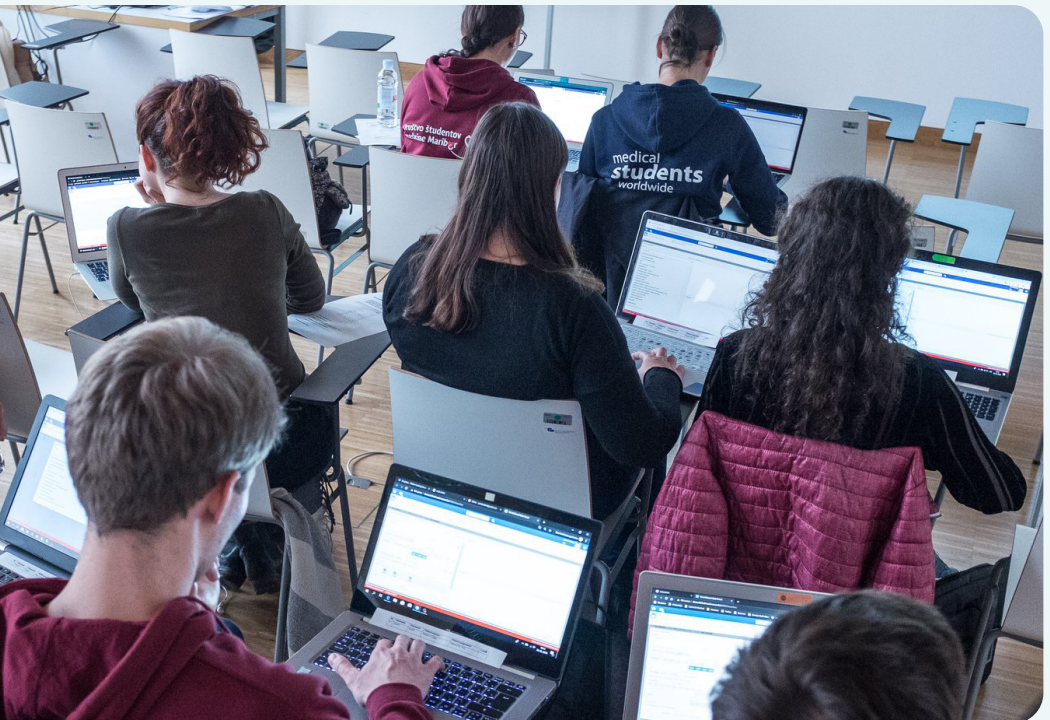

And because learning with Meds EDU is not only informative but also engaging and enjoyable.

Benefits for students

- Manage medications in a **modern, virtual, real-time**, and **online environment**.
- **Simplified transition** from university to clinical practice.
- Develop **clinical skills**.
- Practice **clinical decision-making**.
- Explore **workflows and roles** of clinicians.
- Practice **prescribing and administering medications** in a safe setting.
- Learn about **decision support** and knowledge-based guidance.

Benefits for universities

- Create **a new level of interactivity** between lecturers and students.
- **Collaborate and share knowledge** with other educational institutions.
- Enable an **interprofessional method** of teaching.
- **Capture, track, and analyse** student engagement.
- Create **an integrated learning environment**.
- Familiarise the students with **ePMA** and give them **a competitive advantage** in the market.
- Keep up with the **innovation in clinical technology**.

Our partners

"Better Meds is not only about medicine prescribing and administration but also patient safety, decision making, and the development of clinical skills."

– **Dr. Mark Murphy**, Senior Lecturer in Clinical Simulation at
Liverpool John Moores University

"As more hospitals move to electronic systems, we wanted to ensure our students have access to technology that will consistently deliver a realistic training experience, and provide a robust grounding in the systems they will use as they embark on their nursing careers."

– **Mark Arnold**, Senior Lecturer in Adult Nursing at
Liverpool John Moores University

"The feedback from students is very positive. They find the system intuitive and a better reflection of what they actually see in practice. We can see that it has a lot of potential and there is now a growing interest in using it in other settings, beyond just the Medicine programme."

– **Duncan Cripps**, Chief Support Services Information Officer at **University Hospitals Plymouth NHS Trust**, Senior Lecturer at **Plymouth University**

About us

Better Meds, an electronic prescribing and medicines administration (ePMA) solution, facilitates multidisciplinary collaboration between doctors, pharmacists, and nurses.

It provides doctors with safer electronic medication prescribing supported by pharmacists' feedback.

With the help of a clear medication administration overview, nurses no longer have to worry about accuracy or the type of medication they need to administer. It also integrates with the key clinical systems so that patient data can be accessed in one place and medication can be prescribed more efficiently.

It has been implemented in 10 NHS Trusts in the UK (Acute, Mental Health, and Community, most of them being GDEs or fast followers), in New Zealand, and in two hospitals in Slovenia.
